

When Your Respiratory Responsibilities Outweigh Your Respiratory Resources...

Is this the right cartridge for paint spraying?

What about the revision of the written program?

Have you done the respiratory fit-testing and training on the new person yet?

HELP!!!

How am I supposed to clean this?

Technical Assistance Program

AOSafety® Respiratory Technical Assistance Program

Today, most occupational health and safety professionals face enormous career challenges. In today's lean business climate, they have increasingly greater responsibilities, yet fewer resources to do their jobs. If this describes your situation, we may be able to make your job a little easier. You may be eligible for one or more of the following respiratory support services under our Technical Assistance Program:

Quantitative or Qualitative Fit Testing

Our field sales organization has been trained to conduct quantitative and qualitative fit testing, using the PortaCount®; and Isoamyl Acetate, Saccharin and Bitrex methods. The sales representative will provide you with fit-testing records, including wallet cards for employees, to document the results. Our sales representatives can also train and certify others to conduct fit testing in accordance with OSHA regulatory requirements.

Respirator Wearer Training

Our sales representatives are trained to provide instruction to respirator wearers on the use, fit and maintenance of AOSafety respirators. This instruction also covers all the OSHA respirator wearer training requirements.

OSHA Respiratory Protection Standard Compliance Kit

We can provide an easy-to-use kit with necessary documentation and forms to put together a respirator protection program customized to your workplace conditions. A written program template in print and on disk (Microsoft Word) includes respirator selection, work site-specific procedures, fit testing, and other forms. The kit also has the recently updated OSHA Respiratory Protection Standard along with the inspection procedures that OSHA compliance officers use.

Respirator Selection Guide

For AOSafety customers, we offer a guide that includes over 750 substances with physical and exposure limit data, recommended AOSafety respirator types and cartridges, and limited cartridge service life estimations.

Cartridge Service Life Determination

For assistance with developing cartridge change out programs for air purifying respirators, AOSafety offers an interactive Excel-based program called Merlin™. This program provides cartridge service life information for over 220 chemicals based on conditions in your workplace. You can download a copy of this program by visiting our website: www.aosafety.com.

Educational Modules

AOSafety provides informational modules on select respiratory protection topics, condensing complex information into a concise, "user-friendly" format. Besides written information, these packets include audio tapes, which offer a great opportunity to make productive use of your "drive time." We presently offer packets on the new *42CFR84 Regulations* and *Respiratory Fit Testing*, and plan to offer additional titles in the future.

Technical Support

All AOSafety customers may call our technical support specialists (1-800-444-4774) Monday through Friday with questions about any of our personal protective equipment, including up-to-date government regulations, appropriate product configurations and technical applications. This can be a tremendous help when you don't have the time to search for the right information.

AOSafety Respiratory Products

AOSafety offers a broad range of respiratory systems, cartridges and filters, and qualitative fit-testing kits. Respirators include disposable filtering facepieces, air-purifying quarter-mask, half-mask and full-face masks in silicone and natural rubber and supplied air systems. We also offer cartridges, filters and cartridge/filter combinations certified under the new 42CFR84 regulations.

Our masks are among the best-fitting in the industry, engineered for a comfortable, snug seal on a wide variety of face shapes and sizes. For example, the AOSafety half-mask respirators, which come in 3 sizes, fit low on the nose, giving a superior fit for even the most difficult-to-fit face, and allow plenty of room for eye protection. We also provide fit-test kits, complete with an instructional video and CD-ROM. The instructional media are also available for sale separately.
